

Armaan Nagra's Manifesto for Vice President of CodeSoc

Hey everyone!

I'm Armaan Nagra, a first-year Computer Science student and I am running for Vice President of The Warwick Coding Society. I'm passionate about building projects, solving complex problems, and creating an inclusive space for all regardless of whether you're new to coding or have a lot of experience.

Why Me?

Over the past year, I actively engaged with CodeSoc events, including industry talks, mentorship, Sports Sundays, social events, internship discussions, WHACK and more. These experiences have deepened my understanding of the society's objectives and operations.

My experience organising events during school has strengthened my leadership, planning and teamwork skills. Additionally, participating in 4 hackathons, leading winning projects and working with different people every time has allowed me to learn new technologies under tight deadlines and to work with various people.

My Vision

If elected, I aim to:

1. Strengthen Society Events & Engagement: work with the social secretary to host more events and assist the Sports Coordinator with team-building initiatives to attract more people to share this common love for coding.
2. Encourage More Real-World Projects: provide members with the opportunity to build projects and showcase these to industry professionals with the chance to secure funding. This is to encourage members to experiment with new ideas and technologies without fear of failure.
3. Encourage Collaboration: partner up with other societies to work on interdisciplinary projects, combining coding with fields like Engineering, Maths, Art and more.

If you have any questions, please don't hesitate to contact me.

Best,

Armaan
